Feature 1: Accordion Menus:

- Create a collapsible menu using HTML and CSS.

- Use JavaScript to toggle the visibility of menu items when clicked.

Feature 2: Responsive Images:

- Implement the <picture> element and srcset attribute.

- Provide different image versions for different screen sizes.

Feature 3: Modals:

- Use HTML, CSS, and JavaScript to create modal windows.

- Overlay a modal window on top of the main content.

- Allow users to interact with the modal content and close it.

Feature 4: Tabs:

- Create a tabbed interface using HTML and CSS.

- Use JavaScript to display different content based on the selected tab.

Feature 5: Form Validation:

- Implement JavaScript to validate user input in forms.

- Check for required fields, valid email addresses, and other criteria.

- Provide informative error messages to users.
