The following HTML code will add a favicon to my project:

HTML
```html
<link rel="shortcut icon" href="favicon.ico">
```

This code will tell the browser to look for a file named "favicon.ico" in the root directory of your project. If the file is found, it will be used as the favicon for your project.
You can create your favicon using an image editor or a free online favicon generator. Once you have created your favicon, save it as a file named "favicon.ico" in the root directory of your project.

Here is an example of how to create a favicon using an image editor:
1. Open your image editor and create a new image.
2. Draw your favicon design on the image.
3. Save the image as a file named "favicon.ico" in the root directory of your project.
4.

Here is an example of how to use a free online favicon generator:
1. Go to a free online favicon generator, such as Favicon. cc.
2. Upload your favicon design.
3. Download the generated favicon file.
4. Save the favicon file as a file named "favicon.ico" in the root directory of your project.
